

HealthSync.ai

Healthcare professionals face overwhelming administrative burdens and inefficient workflows. Currently, the diagnostic journey requires multiple patient visits – initial consultation, test ordering, and follow-up appointments to review results. This fragmented process consumes valuable clinical time and delays treatment decisions.

Team: ML Mavericks

Main Pain Points of healthcare industry

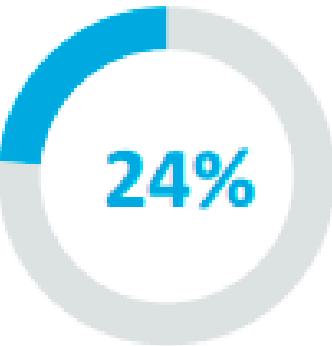

of time spent on administrative tasks is necessary

846,146
cumulative hours per year

of time spent on administrative tasks is unnecessary

of time spent on administrative tasks is clerical in nature or is better suited to another professional

327,540
cumulative hours per year

of time spent on administrative tasks is unnecessary and should be eliminated entirely, if possible

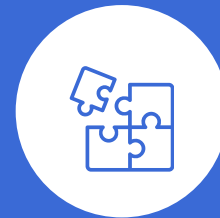

191,065
cumulative hours per year

Our Solution

Patient Benefits

- **50% Time Saved**
- **Streamlined Pre-Appointment Diagnostics**
- **Intelligent Test Recommendations**
- **Comprehensive Report Pre-Analysis**

Doctor Advantages

- **40% Efficiency Increase**
- **Automated Patient Summaries**
- **Reduced Administrative Overhead**
- **Focus on Critical Treatment Decisions**

Key Impact

- **Faster, Smarter Healthcare Delivery**
- **Maximized Professional Productivity**
- **Enhanced Patient Experience**

Current Tech Stack

- **Frontend: React Native**
- **Backend: Node.js**
- **File Uploads: Multer**
- **AI Integration: Gemini API**

Upload Medical Report

Required Tests

Please select the test result you want to upload:

Comprehensive Metabolic Panel (CMP) | To assess kidney and liver function, electrolyte balance, and blood glucose levels, especially given the patient's history of hypertension and type 2 diabetes. It helps establish a baseline and check for any metabolic abnormalities related to the current complaint or pre-existing conditions. | Medium
Priority: Medium

HbA1c | To assess long-term blood sugar control and monitor the effectiveness of diabetes management. This is important given the patient's existing type 2 diabetes. | Medium
Priority: Medium

Upper Endoscopy (EGD) | This is the gold standard for visualizing the esophagus, stomach, and duodenum. It allows direct visualization of any inflammation, ulcers, or other abnormalities and allows for biopsies if needed. Given the patient's age, symptoms, and history of diabetes and hypertension, this test is crucial for accurate diagnosis and ruling out complications.

 AI Assessment

Okay, here's a structured medical summary based on the conversation and provided medical history. It's crucial to remember that this is based on a limited conversation and incomplete information. A proper medical diagnosis requires a thorough physical examination and further investigation.

****Patient Medical History Summary:****

- * ****Name:**** Pankil (Conversation Age 20, Medical History Age 39. Discrepancy noted. Assuming the medical history information is correct.)
- * ****Age:**** 39 years
- * ****Gender:**** Male
- * ****Medical Conditions:**** Hypertension, Type 2 Diabetes
- * ****Allergies:**** Penicillin, Shellfish
- * ****Height:**** 180 cm
- * ****Weight:**** 85 kg
- * ****Blood Type:**** O+

****Primary Symptoms:****

- * Fever
- * Cough (Unclear if dry or productive)
- * Stress (Reported duration of 5 years. Significant Duration.)
- * Coca-Cola Consumption (One per day - possibly related to coping with stress)

****Analysis of Symptoms and History:****

Future Roadmap

Advanced Patient Monitoring

- Chronic Disease Tracking
- Diabetes Mellitus
- Hypertension
- Ischemic Heart Disease

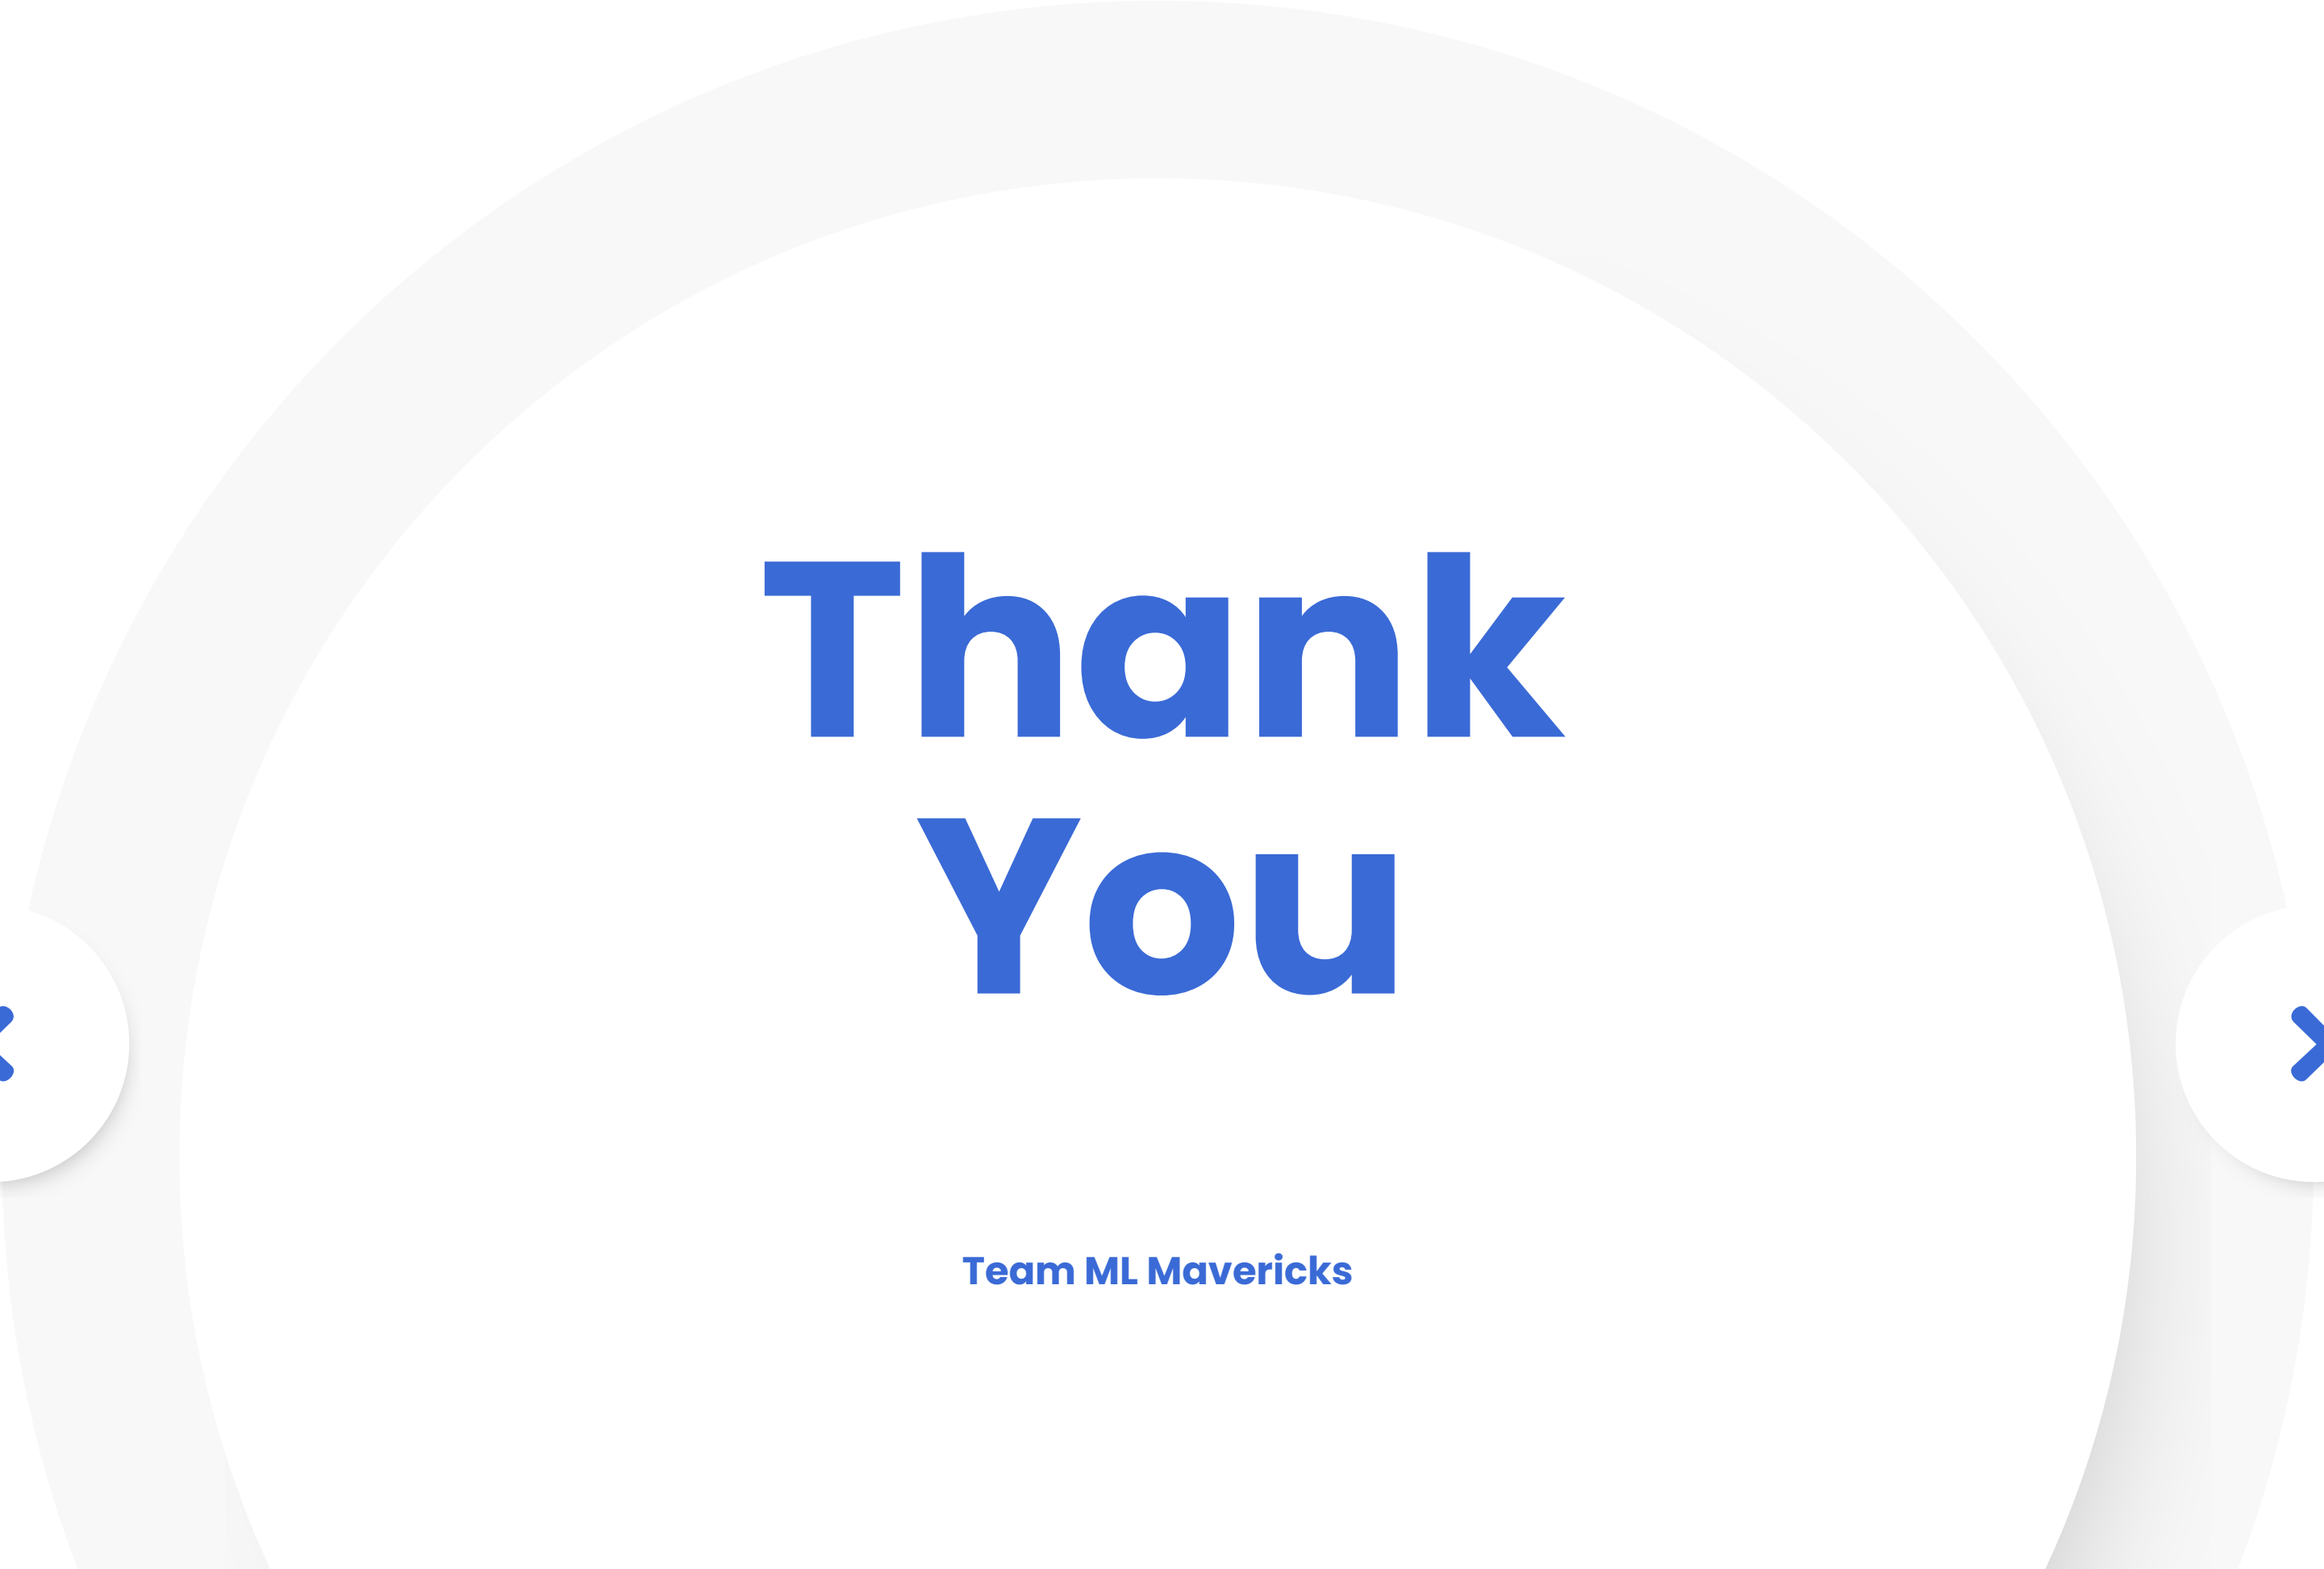

Smart Notification System

- Medication Reminders
- Periodic Health Check Alerts
- Personalized Health Tracking

IoT Device Integration

- Continuous Health MonitoringReal-time Heart Rate Tracking
- Blood Oxygen Saturation Levels
- Activity and Movement Patterns

Thank You
